

Brian Thompson, Ph.D.

Brian received his Ph.D. from Kansas State University before continuing his research in microbiology in his postdoctoral work at the University of Missouri. While at the university, Brian co-discovered key processes that would become the VersaShield® platform technology of Elemental Enzymes.

As President and CEO, Brian is focused on growing Elemental Enzymes into a company that can take complex developing technologies from bench to market. He has worked to establish partnerships with key academic and industry partners to identify and validate next-generation solutions for a variety of industries. We harness the power and potential of enzymes, peptides, and biochemistries to create products aimed at improving crop performance, soil health, plant health and quality, fertilizer efficiency, and increased production of quality food.
